CLEANING CODES:

*HW	Washing by hand rather than by using a machine.
*DC	Dry Clean Only
*X	Do not clean with either water-based or solvent-based cleaner. Use vacuuming and/or light brushing only.
*SW (WS)	Spot clean with upholstery shampoo, foam from a mild detergent, or mild dry cleaning solvent. Do not saturate with liquid. Pile fabrics may require brushing to restore appearance. Cushion covers should not be removed or dry cleaned.
*NA	Not Applicable to a Cleaning Code

PERFORMANCE UPHOLSTERY TYPES:

**Aqua Clean	Aquaclean® technology is a revolutionary fabric treatment that allows you to clean stains using water only. This provides you with simple fabric maintenance in the minimum amount of time. Aquaclean helps to remove the majority of household stains (wine, ink, sauce, fat, mud, chocolate, cream, etc.). It's a treatment that covers every fibre with an invisible molecular layer that prevents dirt from penetrating the fabric. The fabrics are washable with water and have anti-bacterial properties. Furthermore, the fabrics are stain resistant and easy to clean. The fabrics are washable with water and have anti-bacterial properties. Furthermore, the fabrics are stain resistant and easy to clean.
***EasyCare	Almost all normal household, oil- and protein-based stains (e.g. olive-oil, red wine, coffee, tea, milk, fruit juice, jam...) can be removed by sponge cleaning using water and mild soap. First take off any excess residue from the spill immediately with a wet cloth or, if necessary, with abundant (luke warm) water. Then clean the stain with a sponge, water and eventually mild soap. Test the detergent. Don't try to pluck off encrusted soiling as this could damage the pile. Solvent-based stains (e.g; shoe polish, ink, lipstick, nail polish...) should be taken care of with professional cleaning advise. Check website video for detailed demonstration.
FABRIC STANDARDS AND TESTING PROCEDURES	
Martindale Testing	Fabric is mounted flat and rubbed in a figure eight-like motion using a piece of worsted wool cloth as the abradant. The number of cycles endured before the fabric shows an objectionable change in appearance is counted and determines the fabric's abrasion rating. 20,000 = general contract upholstery, 40,000 = heavy duty upholstery.
Pilling Test	Evaluates pilling, which occurs when loose fibers work to the surface after the fabric is subjected to abrasion. Nylon bristles are used to rub the surface of the fabric for a specific amount of time. The number of balls or pills that form on the surface of the fabric are counted, and the fabric is rated accordingly. Class 5 = no pilling, Class 1 = severe pilling.
UV Light Resistance	To measure for colorfastness to light, the fabric to be tested is exposed under specific conditions to a controlled light source which simulates the sun's rays. At timed intervals, the test swatch is compared to a gray scale and the degree of fading is rated. Class 5 = no fading, Class 1 = high degree of fading.
Color Fastness, Rubbing	Fabric's colorfastness and ability to retain color is various conditions. To measure for colorfastness to crocking, the fabric to be tested is rubbed with squares of white cotton fabric (wet and dry) under controlled pressure for a specified number of times. The amount of color transferred to the white test squares is matched to a control chart and a rating is established. Class 5 = no color transfer, Class 1 = high degree of color transfer.
